Summary

Software Developer at Oracle with 3 years building and migrating enterprise banking systems in Java and Spring Boot. Revamped legacy infrastructure, transitioning **700+** J2EE services to Spring Boot, slashing API response times by **75%**, and accelerating debugging through ELK Stack implementation. Rated 'Outstanding' (5/5) for performance at Oracle.

Skills

Languages: Java, JavaScript, Python, Dart, SQL, C, Shell

Frameworks: Spring Boot, Spring Security, React.js, Node.js, Express.js, Next.js, Flutter

AI / Cloud: LangChain, N8N, Agentic AI, Microsoft Azure, Docker, Kubernetes, Firebase

Databases & Monitoring: OracleDB, MongoDB, ELK Stack, Prometheus, Grafana, Zipkin

CI/CD & Tools: Jenkins, Gradle, Git, GitHub, ArgoCD, Postman, JMeter

Core: DSA, OOP, System Design, Microservices Architecture, REST APIs, Agile

Experience

Oracle

June 2023 – Present

Software Developer

Pune, India

- Designed and delivered the Oracle Banking Routing Hub architecture for HDFC Bank, shipping the full system with **0 critical defects**.
- Migrated **700+ REST and SOAP services** from J2EE to Spring Boot / Java 17, using Agentic AI for automated code conversion.
- Built a RESTful API integration layer in Spring Boot connecting legacy J2EE systems with microservices for cross-application data exchange.
- Reduced API response time by **75%** via caching and parsing optimizations; cut debug time by **80%** by instrumenting ELK Stack (ElasticSearch, Logstash, Kibana) observability across production.
- Implemented Role-Based Access Control (RBAC) across **15+ screens** with Spring Security, and shipped CI/CD pipelines on Jenkins for automated testing and deployment.
- Integrated GitHub Copilot and OpenAI Codex into daily development to fast-track feature implementation, code refactoring, and test generation – shipping production features **2x faster** with zero regression in code-quality reviews.
- **Achievements:** Awarded the **FSGBU Pacesetter** for outstanding quarterly contribution, and rated 'Outstanding' (5/5) – the highest performance band at Oracle.

Projects

MyGuard – Gated Community Management Platform | *Spring Boot, Java 21, Flutter, Firebase* | GitHub

- Full-stack mobile platform (similar to MyGate) that digitizes day-to-day life inside a gated residential society, a single app serving **Residents, Security Guards, and Society Admins** with role-specific dashboards and workflows.
- Covers **14 community modules** including visitor pre-approval and QR-coded entry, daily help and guard patrol, amenity booking, digital helpdesk, vehicle and parking, material gatepass, emergency alerts, notices and polls, and an in-society marketplace.
- Built end-to-end project, Figma designs, REST API, mobile app, authentication, and database, with light/dark themes, multilingual support, and offline-capable guard workflows.
- Adopted **OpenSpec** for spec-driven development, authoring module-level specifications that guided AI-assisted code generation and ensured consistent, review-ready implementations across the codebase.

N.O.V.A – Neural Operative Virtual Assistant | *Python, FastAPI, Azure, PyQt6, OpenCV* | GitHub

- Built a full-stack AI assistant with a FastAPI backend and a dual interface, a PyQt6 desktop GUI with 3D visualization and a voice client with wake-word detection.
- Integrated Azure GPT-4o tool-calling that autonomously selects and executes from **13+ registered skills** (file I/O, system monitoring, camera, weather API, browser automation) via a decorator-based plugin architecture.
- Engineered a real-time speech-to-text / TTS pipeline with continuous-listening mode.
- Built a live statistics dashboard tracking response latency, token usage, uptime, and system resource metrics with auto-refreshing visualizations in the PyQt6 interface.

Education

NMIMS – MPSTME

B.Tech in Information Technology

June 2019 – March 2023

Shirpur, India
